GNANI VOICEPREP AI

Practice smarter. Interview confidently. Hire with evidence.

PROJECT OVERVIEW

Gnani VoicePrep AI is an AI-powered interview practice and recruitment assessment platform. It brings conversational voice AI, adaptive interview questions and structured feedback into one product, with separate experiences for candidates and recruiters.

THE PROBLEM

Many students and job seekers cannot easily access realistic interview practice or receive specific guidance on how to improve. Recruiters, meanwhile, need a consistent way to run structured assessments and review candidate performance using clear interview evidence.

HOW THE PLATFORM WORKS

01 CANDIDATE PRACTICE

Prepare: Choose a role or interview focus and start a mock session.
Respond: Answer AI-led questions through the interview workflow.
Improve: Review feedback, strengths, improvement areas and practice history.
Continue: Launch targeted drills based on identified learning needs.

02 RECRUITER ASSESSMENT

Configure: Set up structured company assessments.
Conduct: Track candidate participation and interview progress.
Review: Examine structured reports and evaluation evidence.
Protect: Keep recruiter notes and internal assessment details private from candidates.

CORE CAPABILITIES & INNOVATION

Gnani voice AI Prisma speech-to-text and Timbre text-to-speech support voice-enabled interview interaction.	**Adaptive questioning** Contextual follow-up questions make the interview flow responsive to candidate answers.
Evidence-based feedback Candidate responses inform structured evaluation and actionable improvement guidance.	**Persistent learning insights** Practice history informs strengths, improvement areas and targeted next sessions.
Role-separated access Candidate practice and company assessment are distinct experiences with protected recruiter information.	**Recruitment workflow** Recruiters can manage structured assessments and review candidate reports.

INTERVIEW EXPERIENCE FLOW

Configure interview	AI asks question	Candidate responds	Speech transcription	Evaluation & feedback	Targeted practice

TECHNOLOGY STACK

Frontend: React, Vite, Tailwind CSS **Backend:** Python, FastAPI **Database:** SQLite
Voice AI: Gnani Prisma STT and Timbre TTS

EXPECTED IMPACT

The platform aims to make interview preparation more accessible and personalized, help candidates understand what to improve next, and support recruiters with a clearer and more structured assessment workflow.
